

iPhone Users –

Setup

- Download Wordpress from the AppStore. (it is free)
- Create a user at www.myfourtventy.com
- You receive a email from www.myfourtventy.com, it will contain your temporary password. Once you have this email, click the link within the email and login using your (username) & (temp. password).
- Once you are logged in there will be a link at the top of the page to change your password. Click it and change your password. (if for some reason you do not have the link, on the left there is a link for "Profile" you can change your password there as well)
- Now logout.
- Open the WordPress app, then select "I have a WordPress blog".
- Blog URL: www.myfourtventy.com
- Username: enter the username you created
- Password: enter the password you just created
- Geotagging: OFF
- SAVE, once the validation process is complete you will have one blog listed.

Start Posting

- Click a daily snapshot of time..... (it is possible you will get a error the first time, because you don't have privileges to edit comments or pages)
- Click the Posts button at the bottom of the screen, click the icon in top right to start your post.
- Title: *your post title*
- Tags: *words that describe your post*
- Categories: *select the category that your post falls in*
- Status: *Published*
- Enter any text that you want to use to describe and/or explain the picture.
- Click the Photos button at the bottom, next click the (+) to add your photo "add Photo from Library".
- Select your photo from your library.
- Click Save.
